Administrator Brooks,

Thank you for responding to the questions that the community sent. I have been thinking a lot about what you said about our meeting we had after the public EPA meeting in my community and have decided to attend the event this coming Monday at Carter Carburetor. One of my goals is to try and re establish trust between the EPA and other agencies with our community and I thought one way to do that would be to witness the beginning of the remediation process of another local Superfund site. I look forward to seeing you again and learning more about this process and being able to take some of what I see back to my community with the intention of helping them understand what our future looks like with West Lake Landfill. In the future all community questions will be sent through myself and another CAG member. While I appreciate the Missouri Coalition for the Environment and the the support role, I think its best that questions come and go directly to and from the community! If you have a few minutes after the event I would love to share some of the exciting outreach steps that our community is taking in addition to dealing with the West Lake Landfill. In a strange way it has brought this community back together and for the first time we are starting to look towards the future and make plans! Thank you for your time and again I look forward to seeing you on Monday,

Dawn Chapman
